### Traffic Signal LED Relamping

East Hartford, CT—East Hartford, CT - In an effort to practice energy efficiency the State Department of Transportation will be replacing existing street lightbulbs with LED bulbs. The goal is to proactively replace lamps in order to keep traffic signals functioning in a state of good repair. Where applicable, these projects will also replace circular red LED lamps with red arrow LED lamps at locations that are not currently in compliance with current design requirements as well as replace existing backplates and span-mounted signs.

The tentative date of the project's completion is June 2020.
